Summary

Senior Software Developer with 7+ years of commercial experience in web development and extensive full-stack expertise. Skilled in building reliable, high-quality applications using modern technologies. Demonstrated ability to quickly learn, adapt, and tackle complex challenges. Strong track record in developing systems from scratch, reducing legacy code, and contributing to large-scale migration projects. Experienced with a wide range of front-end and back-end tools, including TypeScript, React.js, Node.js, and AWS, with TypeScript used end to end across the last three projects. Works AI-native, using Claude Code, Cursor, and other coding agents daily throughout the development cycle — codebase exploration, implementation, refactoring, testing, and debugging — and builds the MCP infrastructure that connects those agents to real project context, while keeping architecture, review, and production decisions under engineering control.

Education

Master degree in Computer Engineering, 2020
Kharkiv National University of Radio Electronics — Kharkiv, Ukraine

Project Experience

Senior Full Stack Developer — Finloo

Dates: July 2025 – Present

On-premise affiliate marketing platform with source and offer management, retention tooling, and an admin panel. Designed and built the entire project from scratch, including frontend, backend, and infrastructure. The platform handles up to **20,000 visitors per day**.

Responsibilities:

- Designed and built the entire system from scratch in TypeScript end to end.
- Monitored and maintained all parts of the system: frontend, backend, and infrastructure.
- Discussed, designed, and implemented new features.
- Tracked, investigated, and fixed bugs.
- Built the project's AI infrastructure: MCP servers exposing the database, Grafana, and GitHub to Claude Code, so agents can query production metrics, investigate issues, implement features, and write tests

against real context.

- Integrated two custom Claude Code Skills into the workflow — code review against project conventions and test authoring — so every change is checked and covered to the same standard without manual prompting.

Technologies: TypeScript, NestJS, React, Vite, Docker, MySQL, Claude Code, MCP, Agent Skills

---

Senior Full Stack Developer — Techery Project

Dates: January 2023 – July 2025

SaaS and e-commerce platforms, including iOS app monitoring, MLM functionality, multiple storefronts, admin panels, and complex authorization flows.

Responsibilities:

- Built multiple landing websites from scratch using Next.js, with content managed via a headless CMS.
- Developed new backend services and shared TypeScript packages using Node.js and Java.
- Reduced and refactored legacy code across a large e-commerce platform, covering multiple frontends (Angular/React) and backends (Node.js/Java).
- Contributed to the migration of authentication logic to Auth0.
- Participated in the continuous migration of customers between different sales platforms.
- Took part in a hackathon focused on building an AI-powered chatbot capable of recommending products.

Technologies: TypeScript, Next.js, Java, Node.js, Angular, React, Auth0

Back-end Developer — Moonactive Project

Dates: August 2021 – July 2022

Online game for iOS and Android with Node.js, AWS, Kubernetes, and Redis on the backend. With more than 100,000 daily users, the system had high requirements for performance and API execution speed.

Responsibilities:

- Implemented backend business logic in a high-load system using TypeScript, Node.js, Redis, and AWS.
- Developed internal TypeScript packages and tools to be reused across different projects.

Technologies: TypeScript, Node.js, Redis, AWS

Full Stack Developer — EPAM Project

Dates: July 2019 – August 2021

E-commerce SaaS platform connecting stylists and clients, along with an ETL and analytics system for insurance customer data.

Responsibilities:

- Built the frontend for an e-commerce application from scratch using React.js and Redux, including both the customer-facing app and multiple admin panels.
- Developed backend microservices for the e-commerce platform using Node.js, MySQL, PostgreSQL, GCP, and microservice architecture.
- Created an admin panel and customer analytics system using React.js, Redux, Node.js, GraphQL, and Elasticsearch.
- Integrate Stripe payment system

Technologies: React.js, Redux, Node.js, MySQL, PostgreSQL, GCP, GraphQL, Elasticsearch
